

Bible files

Print your own KJV Bible (small,& normal print)

God in His mercy, has at this time in history, has given us the ability to format and print our own Bible. And He has given us access to this information from almost anywhere in the world. You may want extra space between each verse for notes. You may want a larger or smaller font size. Whatever your requirements are, I hope these files can be of help.

The source of all these files is the text file printed from the DOS version 6.22 of the "Online Bible". **This text is the King James translation of the Bible.**

The text source is: [Bible txt.zip](#). This file is 1.4 meg. You can view this file with almost any word processor. This file has been used to build the files below.

These items are all **8 point** font size (small print)

These files are all the same font size and spacing (all these files are formatted to print double sided.):

File type	File size	Notes (The current version is: V1010 Date: 7/5/1999)
MS Word 97	1.6 meg	Includes a table of contents and "p" for marking the beginnings of paragraphs. Use this file to make changes if you have MS Word 97.
Acrobat PDF	3.7 meg	Ready to print. This file produces a 329 page Bible . Check the sample page first. This Bible can be bound with GBC binding and printed double sided.
Acrobat PDF	15 kB	One page sample. This is a sample page from the 3.7 meg Acrobat file. You may want to look at it before downloading the large Acrobat file.

These items are all **10 point** font size (normal print)

This format gives some extra room between the verses for a few small notes.

These files are all the same font size and spacing (all these files are formatted to print double sided.):

File type	File size	Notes (The current version is: V1022 Date: 10/20/1999)
MS Word 97	1.5 meg	Includes a table of contents and "p" for marking the beginnings of paragraphs. Use this file to make changes if you have MS Word 97.
Acrobat PDF	4.3 meg	Ready to print. This file produces a 611 page Bible . Check the sample page first. This Bible can be bound with GBC binding and printed double sided.
Acrobat PDF	12 kB	One page sample. This is a sample page from the 4.3 meg Acrobat file. You may want to look at it before downloading the large Acrobat file.

The Acrobat PDF type file may be printed at a copy center. Ask them to download it, and normally, while you wait they can print and bind (Comb or GBC type binding) the book for you. They can usually give you a price, in advance, if you let them know how many pages are in the book.

It is not necessary for a person to have their own connection to the internet to print

these files: Most copy centers have an internet connection and can both download the file and print it. They do need, however, to be able to find where to download the files from. Printing a copy of this page will give them the information they need. Download and print this item for yourself and others:

www.ChristianBibleInfo.com (page path: **Task ONE -> Item# 1**) .

Note: If you need a larger font, and you intend to print the book, you may want to download the MS Word file. This will allow you to change the font size before printing (If you double the font size, the number of pages will increase by ~4 times.).

Open the Acrobat PDF files with the free [Adobe Acrobat Reader](#), after downloading.
